Low Priority: Crown Reduction - to reduce Northern round to Western crown by 3 to 4m.
Shaping & balancing remaining crown accordingly.

Reduce the northern and western aspects of the crown by up to 2m, shaping and blending accordingly. Remove MDW.
The subject tree is situated in an open grass area in the carpark to Adur View. From a basic inspection, the tree seems to be in good health and full of vigor. There have been complaints about the crown encroaching over the carpark and some deadwood falling. The intended specification would help resolve the minor complaints. The works would not be detrimental nor affect the amenity value of the tree.
After reducing approximately 1.5 to 2m, the residual width of the crown on the northern and western sides would be 6 to 6.5m from crown center with no discernible change to the hight or the southern and eastern aspects of the crown.

Crown Clean : Remove MDW.

Provision of MEWP.
ALL ITEMS INCLUDING REMOVING ARISING DEBRIS, LEAVING SITE CLEAN AND TIDY.
