Tree Protection Fencing
Tree Protection Fencing as specified within *BS5837: 'Trees In Relation to Design, Demolition and Construction - Recommendations'*. Fencing to be 2.0m high welded mesh Herras fencing, secured to a scaffolding framework set into the existing ground and located to the outside edge of the specified Tree Root Protection Area as indicated.

Manual Excavation Zone
All excavation operations within the RPA of trees are to be undertaken manually with hand tools [under arboricultural supervision] in order to protect existing tree roots. All excavation operations within the RPA of existing trees to be in accordance with *BS 5837:2012 - 'Trees in Relation to Design, Demolition and Construction'*.

Tree Protection Zone 'No Dig' Construction
designated area are to be constructed with a 'No Dig' permeable surface construction. Excavation to be limited to the removal of loose surface material / herb layer and carried out with a manual excavation method only with all existing ground levels to be maintained. The designated area is to be protected with geocell tree protection cellular confinement system installed as per manufacturers guidelines.

Tree Protection Fencing
Tree Protection Fencing as specified within *BS5837: 'Trees In Relation to Design, Demolition and Construction - Recommendations'*. Fencing to be 2.0m high welded mesh Herras fencing, secured to a scaffolding framework set into the existing ground and located to the outside edge of the specified Tree Root Protection Area as indicated.

Existing Trees: Temporary Ground Protection
Existing levels to remain as existing, temporary ground protection to be 150mm depth [min] of Type 03 [permeable - no fines] aggregate over a heavy duty textile. Temporary ground protection to be laid and removed by hand - no vehicles are to track over unmade ground.

KEY

Existing Buildings
Proposed buildings proposed to be demolished.

Tree and Shrub Numbers
T 19 / A / RPA 5.70m
Tree No. / Category / Tree Root Protection Area.

Existing Tree Specimens
Existing tree specimens proposed to be retained and protected.

Existing Tree / Shrub Lines
Existing tree / shrub lines proposed to be retained and protected.

Existing Hedgerows
Existing hedgerows proposed to be retained and protected.

Existing Shrub Groups
Existing shrub groups proposed to be retained.

Existing Trees to be Removed
Existing tree specimens proposed to be removed.

Existing Hedgerows to be Removed
Existing hedgerows proposed to be removed.

Existing Shrub Area to be Removed
Existing shrub area proposed to be removed.

Category A Trees
Existing trees (root protection areas) assessed to be 'Category A': high quality and value.

Category B Trees
Existing trees (root protection areas) assessed to be 'Category B': moderate quality and value.

Category C Trees
Existing trees (root protection areas) assessed to be 'Category C': low quality and value.

Category U Trees
Existing trees (root protection areas) assessed to be 'Category U': unsuitable for retention.

Tree Protection Fencing
Tree Protection Fencing as specified within *BS5837: 'Trees In Relation to Design, Demolition and Construction - Recommendations'*. Fencing to be 2.0m high welded mesh Herras fencing, secured to a scaffolding framework set into the existing ground and located to the outside edge of the specified Tree Root Protection Area as indicated.

Manual Excavation Zone
All excavation operations within the RPA of trees are to be undertaken manually with hand tools [under arboricultural supervision] in order to protect existing tree roots. All excavation operations within the RPA of existing trees to be in accordance with *BS 5837:2012 - 'Trees in Relation to Design, Demolition and Construction'*.

Existing Trees: Temporary Ground Protection
Existing levels to remain as existing, temporary ground protection to be 150mm depth [min] of Type 03 [permeable - no fines] aggregate over a heavy duty textile. Temporary ground protection to be laid and removed by hand - no vehicles are to track over unmade ground.

Tree Protection Zone 'No Dig' Construction
designated area are to be constructed with a 'No Dig' permeable surface construction. Excavation to be limited to the removal of loose surface material / herb layer and carried out with a manual excavation method only with all existing ground levels to be maintained. The designated area is to be protected with geocell tree protection cellular confinement system installed as per manufacturers guidelines.

NOTES
All tree surgery works are to be carried out by an appropriately qualified tree surgeon to *BS 3998: 2010; Tree Surgery*.

Refer to accompanying *Existing Tree Schedule & Arboriculture Method Statement* for further details.
