Architectural PLANTS
Since 1990
Specialist Plant Nursery & Garden Design

**Planting and maintenance plan:**

No groundworks or hard landscaping are being proposed, just the addition of some plants and trees to create a small avenue along the grass track we use. The planting being suggested is as follows;

10 UK grown *Fagus sylvatica (Beech)* clipped overtime as columns to provide screening from the road and wildlife habitat.

2 *Pinus pinea* to mirror the existing pines planted further along the A29.

Maintenance

Our team would continue to maintain these trees as part of their ongoing maintenance of the site. Water is collected in our lake, reducing our reliance on any mains water.

As part of the maintenance we will ensure that the hedgerows continue to be at the height they are of 1.5m and have been for the last 10 years. We will also manage the meadow and all other areas of the estate that provide benefits to the environment and diversity.
We are a business that provides this service so will be carrying out all maintenance works ourselves.
