Conclusion 1.2

The materials selected for this planning application to discharge the condition have been thoughtfully chosen to reflect and enhance the character of the Storrington area in West Sussex. The use of Horsham stone anchors the design in the local heritage, while the vertical cedar cladding introduces a modern yet natural element that blends seamlessly with the rural surroundings. Portland stone monochrome render adds a clean and time-less finish, complementing the overall aesthetic.

The inclusion of Slate tile to the roof with black-framed windows, doors, garage doors, and skylights, introduces a contemporary edge that contrasts beautifully with the softer, natural materials. This palette strikes a perfect balance between traditional and modern design, ensuring the development respects and enhances the visual integrity of the area.

By integrating high-quality, durable, and contextually appropriate materials, this proposal aligns with the distinctive architectural and environmental character of Storrington while delivering a design that is both sustainable and visually appealing.
