Customer Focus

New purchased property, very rural setting. To redesigned and rejuvenate space, creating flow and continuity from one area to another. To create new rooms of gardens each with its own personality and feature. To be easy to care and low maintenance where possible.

A variety of smaller fruit trees in existence, some failures to be removed or replaced. To re-establish the orchard at the top of the driveway

Keeping the main area of the garden more formal and family friendly for entertaining and relaxing.

Introduce more flowering and colourful trees for seasonal interest with accompanying wildflower meadows to provide a self sufficient, low maintenance environment that serves and encourages bird and wildlife.

A dignified, tranquil and beautiful space for mind and soul.

Existing Mature Hedges

Soil type is: **Soilscape 18: slight acid – neutral pH** – Clay base, dense, limestone and mudstone mix with loam rich clay based sub-soil. Prone to impeded drainage especially prone after seasonal precipitation in lower laying areas. Land graduates towards woodland area on western boundary. Fair to good composition, soil known to dry out in summer heat and dryer weather conditions in higher ascending areas. Good to moderate mineral and moderate light chalk and sandstone mix stone content. Good earthworm distribution. Fair - good composition.

Land - Uncultivated: Soil undisturbed; Now used as private garden, meadow heavily grassed with native wildflower, plants and herb mix, mix of mature native, broadleaf trees and bushes to the front of the property, even mix of deciduous acts as a good shelter belt. Open farm-land used for livestock grazing to the rear and sides.

You will also find every tree listed in the catalogue or in our website for more detailed information.www.barcham.co.uk
