I'm sure 2-3 cars would fit in front of garage.
In addition my clients intend to put a gravel surface on the area where the cars are parked.
I hope that helps.

According to the WSCC parking calculator we would need 2.2 parking spaces (Guidance on Parking at New Developments) as the proposal is for a 5 bed. From what I can see on Google Maps, the drive way is relatively long. Am I correct in assuming that you can fit 2-3 cars on this drive? I can see from the images you have kindly provided there are cars on the grass, but I am not sure if WSCC class this as a designated parking space.
