

The subject tree is situated in an open grass area in the carpark to Adur View. From a basic inspection, the tree seems to be in good health and full of vigor. There have been complaints about the crown encroaching over the carpark and some deadwood falling. The intended specification would help resolve the minor complaints. The works would not be detrimental nor affect the amenity value of the tree.

After reducing approximately 1.5 to 2m, the residual width of the crown on the northern and western sides would be 6 to 6.5m from crown center with no discernible change to the hight or the southern and eastern aspects of the crown.
