Hi Tom,
Thanks for sending over the report earlier.

I have reviewed and have a couple of other queries.

- From reviewing Figure 1 it would appear that validation pit TPA was advanced in the area of the topsoil stockpile, it is however not clear how this validation pit could have been advanced if there was a large stockpile of soil in this part of the site.
- Also, the sampling of the topsoil stockpile was undertaken on 18th August – is this material still stockpiled in this area or has it been spread across the site?

Kind regards

Kevin
