

T2 looking west

T2 looking south

This application is for work to be carried out on 2 yew trees site map attached

1x Yew T 1 front garden (TPO ), reduce entire crown to shape by 0.5-1m. Emphasis to be placed on the south western side and the south eastern side. To allow more light into property and neighbouring property .

The last time this tree was subject to surgery was in 2014. DC/14/0169 refers

1 x declining Yew T2 rear garden (TPO) . the tree was subject to surgery in 2020, unfortunately the top growth of the tree has declined further. Attached photos show this. The lower boughs are showing signs of growth.

Whilst removal of all deadwood would be allowed, this could leave the odd branch in situ, looking unsightly and the tree unbalanced. Furthermore anthing left would probably decline in the future.

What has been suggested and is now requested is that a crown reduction down to 5M from ground level is undertaken. This hopefully will allow the tree to direct its energy into a balanced growth and become an environmental asset.
