[redacted] [redacted]

Good Afternoon,

Thank you for getting back to me. I would estimate the current height of the tree as approximately 60-70ft which will remain the same as I do not intend to reduce the height. The limbs which would be laterally reduced are approximately 20ft in length and would be brought back to previous cut points. I would estimate this to be 9ft off the sides for this reduction. I have added a picture of the tree which shows where the previous reduction has taken place.

I hope this is helpful and what was required.
Many Thanks and
Kind Regards,
Joe
