Ref DC/25/0262 9 The Willows, Billingshurst, RH14 9WL

With regards to further information requested

The height of the overall tree is between 10 and 11 meters. I have requested for the crown to be reduced from the top leaving the overall height to be between 6 and 7 meters. This is to remove the dead wood and to tidy the shape of the tree up. This was measurements suggested by an expert.

The above picture shows trunk 1 which is wounded and hangs over CENTURION CLOSE. This points in a NORTH direction. This is about 10-11 meters in height and this would be cut down to the main trunk about 2 meters from the floor. This will prevent the trunk from falling into the road and causing injury or damage.

The above picture shows the second trunk we are requesting to pollard. This trunk again sits at an overall height of 10-11 meters. This trunk points in a SOUTH-EAST direction. I would like to cut this trunk down to 2 meters from the ground. This will prevent loss of light to both properties. This will also solve the problem of leaves landing in gutters and the pigeon faeces gathering on both properties

The other eight trunks will be left as is with only the dead wood being removed from the very top and tidied up.
