FAO JOSHUA LEE
I have not been able to access your website despite several attempts hence I am emailing you with my comments relating to this application I would be grateful if you can take these considerations on board as part of your investigation 1. The height of the replacement fence panels along with the added trellis contravenes the local development framework policies 2. The design of the trellis element is questionable as it does not fit with the definition of a trellis. Usually the height of a fence/trellis depends on local regulations and community guidelines. In many areas trellises are considered extensions of the fence and are subject to the same height restrictions. Additionally in this case the trellis is not an open structure nor is the intention of the trellis to support plant life.
3. The appearance of the trellis is at odds with the local community.
I am not aware of any fences/trellises in the vicinity of this height The character of the new trellis is at odds with the original 6 foot high fence panels and looks completely out of place The design is not in line with the area and our view has now been diminished due to the extended height of the replacement panels and trellis If possible can you please provide confirmation of receipt of this email Thanking you in advance Regards [redacted]
