[redacted] [redacted]

I was having trouble uploading a supporting image on my application yesterday the tree in question t3 is around 22m in height and needs to be reduced by approximately 4m there will be nothing reduced from the branch width as its just the top that needs reducing to balance the tree they had the tree t2 removed a few years back as was a simular situation to his one where's its grown over for the light its on a bank and has quote a lean on it
Regards Lawrence
