Stuart Jolliff

Jolliff Developments Ltd

By email:

06/08/24

Dear Mr Jolliff,

Re: Private Water Supply at High Barn, Crays Lane Site – Raw Borehole Water Analyses (to date and inferences); Proposed Design and Compliance with PWS Regs 2016 Amended 2018 – Rev A

Further to the request that a raw borehole sample was taken by an accredited UKAS PWS Sampler, I can confirm that this was performed on 05/07/24 by Stefan Massingham. The borehole was allowed to flow for some 2 hours prior to sampling. It has been frequently flushed and allowed to develop during drilling prior to sampling. Visually, the water was turbid and grey in colour.

The samples were taken in accordance with DWI requirements (based on Group A & B Schedules PWS Regs 2016), with the correct bottles supplied by the UKAS Accredited lab, SE Water Scientific Services (SEWSS). and then duly transported to the lab thereafter, at the required transit temperatures (between 2°C and 8°C). Additional determinands were tested as it was highly likely that the raw water would require RO membrane treatment.

Signed acceptance of IWT Order by SEWSS

Treatment Prognosis

Based on the failures to date, the water treatment system will need to remove excess:

- iron (15,600.4 ug/l, maximum 200.0 ug/l)
- manganese (236.4 ug/l, maximum 50.0 ug/l)
- aluminium (7,346.0 ug/l, maximum 200.0 ug/l)
- sodium (358.2 mg/l, maximum 200.0 mg/l)
- chloride (274.30 mg/l, maximum 250.00 mg/l)
- fluoride (1.920 mg/l, maximum 1.5 mg/l)
- ammonium (0.698 mg/l, maximum 0.500 mg/l)
- turbidity (296.000 NTU, maximum 4.000 NTU)
- boron (1.577 mg/l, maximum 1.000 mg/l)
- suspended solids
- Bacteria – failures for Coliforms and general bacteria

The recommended treatment will be partial settlement; extensive particle filtration followed by a UF and RO unit (see emailed attachment for full RO design calculations) with remineralisation thereafter of the permeate. The treatment train will be similar to that for the Brook Hill Development, recently accepted by HDC and reported on by HDC consultant Dr. G. Pearce; and also, Lime Kiln Farm, Copsale.

We propose the following design:

- Borehole pump feeding
- 1350 litre raw water tank with level controls feeding

Invicta Water Treatment

Mobile. 07970 154529

Email. sales@invictawatertreatment.co.uk

www.invictawatertreatment.co.uk

- Booster pump feeding
- Automatic backwashable media filter for sediment removal to 5 um or lower feeding
- Automatic regenerating meter-controlled softener to remove residual iron, some organics and any hardness
- Bespoke UF unit (to remove colloidal clay)
- Bespoke RO unit (as per attached preliminary RO design)
- Remineralisation filter
- UV Unit to disinfect prior to storage
- 5,000 litre treated water tank with level controls
- Booster pump
- 5 um sediment filter cartridge
- UV disinfection unit with UV sensor and controls
- Control panel with level indicators
- PVC rigid solvent weld pipework, MDPE pipework
- High strength chlorination of all pipework prior to use
- UKAS sampling of treated water as per PWS Regs

We are not proposing chlorine dosing currently, as the supply is limited to a handful of new build properties.

The filtration equipment is modular in nature and so upgrades are quite straight forward. The treated water will meet the PWS Regs requirements.

Product performance calculations are based on nominal element performance when operated on a feed water of acceptable quality. The results shown on the printouts produced by this program are estimates of product performance. No guarantee of product or system performance is expressed or implied unless provided in a separate warranty statement signed by an authorized Hydranautics representative. Calculations for chemical consumption are provided for convenience and are based on various assumptions concerning water quality and composition. As the actual amount of chemical needed for pH adjustment is feedwater dependent and not membrane dependent, Hydranautics does not warrant chemical consumption. If a product or system warranty is required, please contact your Hydranautics representative. Non-standard or extended warranties may result in different pricing than previously quoted. Compliance

With reference to the PWS Regs 2016 and amended 2018, this supply will be classified as Reg 9. We have allowed for a DWI risk assessment on the completed system by David Clapham (RIAMS independent consultant) along with the required sampling by a UKAS accredited sampler. We understand, under PWS Regs section 6 & 7, the duties of the council. We look for the council to provide clarity on this.

Ongoing Maintenance & Sampling

The water treatment system will require maintenance. We will provide a bespoke O&M manual, with specific procedures for your system along with the manufacturer's documentation. We will issue a line drawing of the water treatment process and provide hands-on training during the commissioning phase. Critical spares will be left on site and these are: spare UV lamp, quartz sleeve and sediment filters.

Regarding headings 3,4,5 in HDC Water Neutrality Compliance requirements. Please note 3 and 4 will be detailed at contract phase in the O&M manual. The manual will also cover recording. We have other applications/systems passed based on the same wording as in this report. With regard to recording: the designated maintenance contractor/owner/agent looking after the system will take necessary samples and record in the site log book, which forms part of the O&M manual. Until the system is commissioned, we cannot say which determinands need to be tracked but it is highly likely it is those which have failed and highlighted below. Specific SOPs, contained in the O&M, will be written once the system has been commissioned and will cover inspection, cleaning and maintenance. We will comply with PWS Regs 2016 amended 2018.

Sampling the raw borehole as well as the treated water is important to understand how the ground water is changing over time and how it reacts to weather events. We will only test pertinent process determinands and those required under the Schedules (see PWS Regs). If the council requires regulatory samples, we assume we will be instructed accordingly.

Borehole Design As Drilled On Site

The borehole has been drilled as per the drill log attached to the email and as below (page 1 of log). The borehole produces water from the grey sands/sandstone and red clay. The borehole has been finished above ground. There are no known sewage systems or ground contamination sources nearby.
