

Planting Specification for new boundary hedgerows

Plants to be between 80-90cm when planted

Main Matrix (Transplants/Quicks)

70% of planting stock	
Hawthorn	Crataegus monogyna
Blackthorn	Prunus spinosa

Interplant (Whips/Transplants)

30% of planting stock	
Hazel	Corylus avellana
Holly	Ilex aquifolium
Dog Rose	Rosa canina
Field Maple	Acer campestre
Dogwood	Cornus sanguinea
Spindle	Euonymus europaeus
Wild Privet	Ligustrum vulgare
Common Beach	Fagus sylvatica
Common Hornbeam	Carpinus betulus
Guelder rose	Viburnum opulus

Hedging should be planted in two staggered rows at a density of not less than 5 per metre, with approximately 450mm between plants in the same row, and 300-400mm between rows.

The interplant whips/transplants should be planted within this pattern in groups of 2/3.

Planting will be protected from grazing animals where applicable with a 1.5m high galvanised equine stock fence (or similar) erected 1m away from new plants.

All hedgerow planting should be carried out in accordance with BS4428:1989, Code of practice for general landscape operations.

Hedgerow shrubs should either be notch planted or trench planted.

Hedge trenches should be dug to a minimum depth of 400mm and width of 600mm, with the plants put into the ground at the same depth at which they had been previously grown in the nursery. All plants need to be well heeled in after planting and watered in during dry weather.

Hedges to be planted between November and March while plants are still dormant. Avoid planting in very cold or wet weather.

20 year Management Plan:

- Plant new hedgerows during winter³
- Connect them to other natural features to support wildlife spread³
- Prune new hedgerows for the first 3-5 years to encourage dense, bushy growth³

Ongoing Management:

Manage hedgerows on a cycle to maintain their health and value for wildlife²

Gradually cut hedges higher and wider to prevent them from becoming 'leggy' or 'gappy'²

Rejuvenate hedges through laying or coppicing every 40+ years³

Protection Measures:

Establish or maintain green cover buffer strips adjacent to hedgerows²

Protect hedge nesting birds by avoiding cutting or trimming during their nesting period²

Hedgerows will be protected from damage by ensuring these measures are in place⁷

Long-Term Maintenance:

Aim for a balance of old and young hedgerow trees to support diverse wildlife²

Trim at the best time for nature, ideally late winter, to allow wildlife to feed on berries and fruits²

Environmental Benefits:

Hedgerows enhance biodiversity and provide habitat for a wide range of species¹

They offer erosion control, water regulation, and carbon storage to combat climate change¹

A new hedgerow can store 600 to 800 kilograms of carbon dioxide per year for up to 20 years⁹

By following these guidelines, hedgerows can be effectively managed and protected to ensure their ecological and environmental benefits are sustained over the long term. Consult with local wildlife trusts or experts for tailored advice and to comply with any specific regulations in your area.
