Dear Sir/Madam,

In response to your email, I can confirm the height of T1, Sycamore to be approximately 15 meters, with a crown spread of approx. 7 meters. The proposed finished height would therefore be 11 meters and spread 4 meters.

It appears recent construction work in the area may have damaged the trees stem and roots. The stem has server bark loss, consistent with that of fire damage. See photo below.

The works recommended are to rejuvenate growth on what appears a sparse and stressed specimen.
