Dear Planning

Following a comment on this planning application about noise, can you refer to the below a response from the contractor

Fearless Ramps use the following sound proofing technique on our ramps:

- Fearless Ramps use a double layer riding surface to reduce noise when using the ramp (2x layers of 9mm cross grain, and 6mm Skatelite Pro)
- We use the highest quality stainless steel fixings on our ramps, custom designed with the help of Fearless ramps by an individual company in Germany, the strength of these means the ramp is more structurally robust and let likely to make noise when being used.
- Fearless Ramps use more fixings and more supporting cross beams than any of our competitors, improving the strength and rigidity of the overall structure, reducing noise output.
- Our railings in this design are cladded (closed), rebounding sound back towards the skatepark when in use.

Decibel readings:

Fearless Ramps recently conducted a decibel reading survey within one of our recent skateparks, Cambourne. We recorded the decibel readings from several distances whilst the ramps were in use from all types of riders. The readings shown below was recorded at 'Max Load', this is the maximum reading that was created from the users of the skatepark.

Galvanised Steel Framework & Skatelite Pro Riding Surface – Cambourne Skate Park		
Distance	**Level**	**Decibel Reading**
0 metres	Max Load	52.6
5 metres	Max Load	50.3
10 metres	Max Load	44.1
15 metres	Max Load	41.3

Please let me know if you require anything further.

Kind regards.
