45 Meadowside, Pulborough, West Sussex RH20 4EQ

Hornbeam, Opposite No. 45 Meadowside.

Remove major dead and diseased wood, 25mm in diameter and over. Reduce over extended lateral branches growing towards Number 45 by up to 4 metres. Reduce the remainder of the crown by up to 3 metres, reduce by thinning, to leave a residual height of approximately 12m and a residual radius of approximately 4m.

The tree has grown to be too large for the location.

The lower to mid branches have become overextended over the highway and towards the flats and are causing imbalance to the crown, while redundant branches are dying and being retained.

The roots are lifting and causing cracking to the pavement.

Overall, rather than fell this tree to reduce the nuisance and distress it causes to the local residents, it is far better to begin a maintenance program of regular crown reduction to reduce it to, and to maintain it at, a size more suitable for the location.
