

No.	TPO no.	Species	Height	Trunk diameter	Radial crown spread	Crown break	Crown clearance	Age class	Physiology	Structure	Comments	Category
1741	W1	English oak	18m	485mm	6m N 12.25m E 2m S 3.25m W	2m	4m 1.75m E	Middle aged	Average	Indifferent	Single stem to 2m with one large lateral limb extending to the E for 12m becoming end weighted but forming part of the lower canopy of the adjacent oak tree 1740, remaining stem is straight with the canopy biased towards the N due to suppression by adjacent tree; not readily visible to drives on the W but forms an essential component of the two trees together; of moderate quality but low value; but of long-term potential.	C (1)
1750	W1*	English oak	11m	740mm (over ivy)	5.25m N 7.25m E 4.75m S 9.25m W	4m	3m	Mature	Below average	Moderate	Stout trunk at a slight lean to the NW, three co-dominant stems from 4m, NW, SW and E, unions are obscured by ivy but appear sound; canopy is asymmetrical and biased towards the N and W due to suppression by adjacent oak tree to the S, smaller than average leaf size and slightly sparsely foliated, indicating that the tree is suffering from some form of stress which has not been identified; readily visible from adjacent road to the W; key component in the group in which it stands; of moderate quality and value; of long-term potential.	B (12)
1755	W1	English oak	8m	205mm	3m N 4.2m E 2.75m S 1m W	1.5m	1.5m	Middle aged	Below average	Moderate	Sparsely foliated; smaller than normal leaf size; small suppressed specimen; of low quality and value; of medium-term potential.	C (12)
1756	W1*	Field maple	13m	280mm 260mm	5.75m N 6m E 2.5m S 5.75m W	2.3m	2m	Middle aged	Average	Hazardous	Twin stemmed from base N and S, S stem has cavity on the N side possibly from a previous tear-out 200mm across, 400mm in depth with exposed heartwood, cavity also extends into the N stem which is at a lean to the NE and liable to failure; of low quality and value and of little potential.	U
1760	W1*	English oak	18m	580mm	3.5m N 8m E 8.5m S 5.5m W	9m	4m E 2.5m W	Middle aged	Average	Moderate	Small column of exposed heartwood on the NE side at ground level to 600mm, 130mm across at the base tapers to a point with a seam running up the side of the trunk out of view behind the ivy (at 5m) typical of a lightning strike; single vertical trunk, many low branches to the W; bifurcates at 9m, co-dominant stems E and W; slightly asymmetrical canopy as suppressed by oak tree to the N; key component in group in which it stands, readily visible from driveway and adjacent properties to the W; of moderate quality and value; of long-term potential.	B (12)
1765	W1	English oak	18m	640mm	3m N 8.25m E 5.75m S 8m W	10m	1.75m E 1.75m W	Mature	Average	Moderate	Single vertical trunk to 10m bifurcates, co-dominant stems E and W, broad sound union; slightly asymmetrical canopy due to position within group of trees; a key component of the group; readily visible to the W from adjacent driveway and buildings; no significant defects noted. Of moderate quality and value; of long-term potential.	B (12)
