In support of comments I submitted online today regarding Planning Application DC/25/1155, please see four files attached to better illustrate my particular concerns.

I provide this information as owner of a property in Caryll Place (adjacent to the proposed development). I am also Chairman of our Residents' Management Company Ltd (14 properties) and am aware that several of my neighbours share the same concern.

Regards.

## Comments Details

Commenter Type:	Neighbour
Stance:	Customer objects to the Planning Application
Reasons for comment:	- Design
Comments:	<p>In the document entitled "Land to the east of Tilletts Lane, Warnham - Flood Risk Assessment and Drainage Strategy", it clearly states that "The proposed development will increase the impermeable area on site and, therefore, will increase the quantity of surface water runoff from rainfall."</p> <p>I believe this to be an accurate assessment and am particularly concerned that insufficient attention has been given to the manner in which drainage of excess surface water will be managed in the south east sector of the development. The plans appear to suggest that excess water will be channelled away via an existing Drainage Channel running north to south immediately outside the eastern boundary of the Warnham C of E Primary School. If that is allowed to happen then it will hugely exacerbate an existing flooding problem where, at times of heavy rainfall, water cascades off the end of said channel and spills down the footpath towards Church Street. At various points along the way, water also spills from the footpath into Caryll Place before ending up in Church Street. The drains in Church Street are already unable to cope so the road quickly becomes flooded.</p> <p>I reside in Caryll Place and have copious photographic evidence to illustrate this problem which I am pleased to submit by email.</p>

Kind regards

Floodwater overflowing from  
Drainage Channel from  
playing fields above  
Warnham Primary School

Floodwater spills over  
into Caryll Place roadway  
and down into Church Street

Church Street,  
Warnham  
24/04/2023

Re: DC/25/1155  
Annotated extract from Inco Surveys:  
TOPOGRAPHIC SURVEY, Sheet 4 of 4

The proposed development will increase the impermeable area on site and, therefore, will increase the quantity of surface water runoff from rainfall.

SuDS planning must ensure that there is no increase to the rainfall runoff that enters the existing Drainage Channel shown here.

The roadway in Caryll Place is frequently inundated with stormwater from this existing Drainage Channel (see photos enclosed).  
The proposed development must not exacerbate the problem of water flowing into Caryll Place then onwards into Church Street.
