As requested, please find below the relevant information provided by our tree surgeon.

The start height of the tree is 40ft and the start length for lateral growth from all points are as follows:
South - 6ft
West - 7ft
East - 9ft
North - 9ft

Approximately 15-20% off.

The work being carried out is a full tree pruning/pollard.

We hope that this information is sufficient, but please do let us know if you need anything else.

As mentioned in my previous email, if we wait 6 weeks, we will be unable to prune the tree. Is there anyway this can be fast tracked?

We look forward to hearing from you.

Kind regards
Jess (on behalf of Rusell Clark)
