Albury S.I. Limited has prepared this Report with reasonable skill and care for the sole use of the Client in accordance with the terms and conditions of the contract under which our services were provided. No duty of care and no contractual obligation (whether expressed or implied) is owed to any third party. Should any third party rely on this Report then they do so at their own risk and Albury S.I. Limited shall have no liability whether in contract or in tort, in negligence, for breach of statutory duty or otherwise to any such party. No warranty, expressed or implied, is made as to the professional advice included in this Report or any services provided by Albury S.I. Limited.

The following foreword should be read in conjunction with this report. Any variations on the general procedures outlined below are indicated in the text.

## **FOREWORD**

The recommendations made and opinions expressed in this Report are based on the strata conditions revealed by the fieldworks as indicated on the exploratory records, together with an assessment of the data from in situ and laboratory tests. No liability can be accepted for conditions which have not been revealed by the fieldworks, for example, between exploratory positions. While this Report may offer opinions on the possible configuration of strata, both between the excavations and below the maximum depth achieved by the investigation, these comments are for guidance only and no liability can be accepted for their accuracy. The data obtained relate to the conditions which are relevant at the time of the investigation.

The groundwater observations entered on exploratory records are those noted at the time of the investigation. The normal rate of progress does not usually permit the recording of any equilibrium water level for any one water strike. It should be noted that groundwater levels are prone to seasonal variation and to changes in local drainage conditions. The word 'none' indicates that groundwater was sealed off by the borehole casing or that no water was observed in the exploratory hole upon completion.

It should be appreciated that this report does not constitute a Geotechnical Design Report (GDR) as defined in Eurocode 7 and no aspect of this report constitutes a design. Specific sections of this report are generally in line with the guidance set out in Eurocode 7 for a Ground Investigation Report (GIR), as defined within BS EN 1997:-2 (2024). This provides guidance on the number and spacing of investigation positions, methods of investigation and sample quality class to be achieved which may not have been met by this investigation.

This Report is prepared for the specific purpose stated and in relation to the development proposals or usage indicated to Albury S.I. Limited at the time of preparation. The recommendations should not be used for adjacent schemes and may not be appropriate for alternative proposals.

This Report is the Copyright of Albury S.I. Limited with whom the master copy resides. Further electronic copies can be obtained subject to the clients permission.

# 1 INTRODUCTION

---

## 1.1 Objectives

The Desk Study comprises a review of the readily available geological, historical and environmental sources for information about the site, together with a walkover survey of the area. This includes the commissioning of an Envirocheck report supplied by Landmark Information Group. This report presents the findings of the Desk Study together with an outline Conceptual Site Model and preliminary risk assessment, based upon identified potential sources of contamination which may pose a significant risk to receptors or end-users of the site.

In preparing this report reference has been made to relevant guidance, which includes the 'Investigation of potentially contaminated sites. Code of Practice.' (BSI, 2011) and the Land Contamination: risk management (LCRM) guidance (2020).

## 1.2 Proposed Development

The client proposes to apply for a change of use from agricultural use to residential usage, to comprise 2 no dwellings. The proposed layout is included as Figure 1.

# 2 THE SITE

---

## 2.1 Site Location

The site covers an area of 600m<sup>2</sup>, is square in shape and is located at Ordnance Survey National grid reference 523890, 115540. The site is occupied by a rectangular agricultural barn within an open field, with Blackstone Lane present to the east. There are open fields to the west and south, with a public footpath immediately to the north and woodland beyond.

## 2.2 Site Topography

The recent OS mapping indicates that the site lies somewhere between 30mOD and 35mOD rising gently to the north east. A spot height of 32.8m is recorded at the field gate access to the north east.

### 3 SITE HISTORY

#### 3.1 Historical Mapping

The historical Ordnance Survey mapping contained within the Envirocheck report has been reviewed. The maps reviewed are included in Appendix 1.

The earlier tithe map of 1839 has also been reviewed and the site area at this time forms part of plot 27, which is indicated as being "Great chalk field" with state of cultivation listed as arable.

**Table 1 - Historical Mapping Summary**

| Date      | Source Scale | Relevant Information                                                           |                                                                                                             |
|-----------|--------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
|           |              | On Site                                                                        | Off Site                                                                                                    |
| 1874-1875 | 1:2,500      | Site forms part of a larger parcel of open land.                               | Spot height of +108ft (32.9m) in lane to east                                                               |
| 1897      | 1:2,500      | No change.                                                                     | Track now evident to north of site.                                                                         |
| 1910      | 1:2,500      | No change.                                                                     | Property identified as Bassells 100m north of site. Track to north now straight and parallel with boundary. |
| 1956      | 1:2,500      | Existing structure now present<br>Benchmark on structure of +107.17ft (32.67m) | Property now present to the north east known as Four Elms.                                                  |
| 1974      | 1:2,500      | No change.                                                                     | Pond 175m to the south no longer shown.                                                                     |
| 1984      | 1:2,500 *    | No change.                                                                     | No relevant change.                                                                                         |
| 1994      | 1:2,500      | No change.                                                                     | No relevant change.                                                                                         |

\*indicates partial mapping coverage

At the time of the earliest mapping the site formed part of a larger open field until sometime between 1910 and 1956 when a structure appears. The site has remained relatively unchanged to the present day.

### **3.2 Aerial Imagery**

Consideration of the modern aerial imagery contained reveals that the adjacent area to the west of the structure is being used for storage of silage. No other vehicles are evident on the modern historic aerial imagery.

## **4 GEOLOGY**

---

### **4.1 Published Geology**

An examination of the 1:50,000 British Geological Map extracts indicate the site to be underlain by the Folkestone Formation of Cretaceous age and typically this comprises sand or sandstone. The Gault Formation of a similar age outcrops immediately to the south of the site and locally to the west are superficial outcrops of Head of recent or Quaternary age.

### **4.2 Historical Borehole Records**

The records of the BGS have been reviewed and no relevant records exist for the site or immediate area.

### **4.3 Hydrogeology**

The site is underlain by a principal aquifer of high vulnerability associated with the underlying Folkestone Formation. However, the site is not underlain by a drinking water Source Protection Zone [SPZ]. The nearest groundwater abstraction is 1981m west of the site. The Gault Formation to the south is a non-aquifer of negligible permeability.

### **4.4 Radon**

The Envirocheck report indicates that the site is in a lower probability radon affected area as less than 1% of properties are above the action level. Moreover, no protective measures as described in BRE report BR211 are necessary in the construction of new properties or extensions.

## 5 ENVIRONMENTAL SETTING

---

### 5.1 Hydrology & Flood Risk

The nearest surface water feature is a drain located 181m south of the site. The site is not at risk of flooding from rivers and there is limited potential for groundwater flooding to occur.

### 5.2 Landfill Data

There are no active or inactive registered landfill sites listed in the Envirocheck report within 1km of the site. Whilst there are small infilled ponds locally within 250m, due to the age and distance, these features are not credible sources of ground gas generation which would pose a risk to development and specific monitoring is not necessary.

### 5.3 Recent & Current Land Use

The site has historically been used for agricultural storage. No other relevant trade directory information is available for the site or immediate area. The nearest inactive trade is a joinery manufacturers 448m north of the site.

### 5.4 Ecologically Sensitive Receptors

The nearest sensitive environmental or ecological receptor is The Alders Ancient and Semi-Natural Woodland located 260m south west of the site.

## 6 SITE RECONNAISSANCE

---

A visit to site was made on 6<sup>th</sup> November 2025 where observations were made using the procedures outlined in CLR 2. At the time of the survey the conditions were dry and overcast.

The majority of the site is covered by short grass and nettles with made ground, with chalk rubble apparent at surface, notably to the north and west of the existing structure. The existing structure is a two-storey in height and steel-framed, with chrysotile cement sheet profile roof and cladding.

Internally the surfacing comprises made ground of chalk rubble and some concrete fragments evident at surface, as well as localised cement sheet fragments (probable ACM). There is incoming electricity and meter in the north west corner of the structure. There is agricultural machinery being stored within the structure and the central part of the structure is inaccessible from ground level, due to the presence of a grain silo or similar.

A public footpath is present immediately to the north of the site area and the site is openly accessible to members of the public. A locked five-bar gate provides vehicular access off Blackstone Lane to the north east.

There are mature trees including Oak, to the north and east of the site. Dense surface vegetation and brambles are also present to the east of the structure, obscuring the ground surface in this area. There were also heaps of hay bales and fodder present to the west of the site and some fodder obscured by vegetation to the east of the site.

Evidence of drums of sodium hypochlorite, which is an alkaline corrosive – chlorine bleach, were noted both externally and internally. A discarded drum of fuel, probably red diesel, was also noted in the south west of the site.

During the visit a number of photographs were taken, which include close ups of areas of concern. A plan showing the existing site layout, which has been annotated with specific features of interest, is presented as Figure 2. The photographs taken during the site reconnaissance are presented as Figure 3 attached to this report.

## 7 PRELIMINARY RISK ASSESSMENT

---

### 7.1 Conceptual Site Model

In accordance with current LCRM guidance, a Conceptual Site Model has been prepared for this site. The model prepared for the site in tabular format below lists potential sources of contamination, identified receptors on and within the immediate vicinity of the site, together with the pathways between them. A pathway must exist for an identified source to pose a risk to a receptor, thereby forming an active pollutant linkage. The primary receptors are considered to be future residents (human health), surrounding ecology (plants and animals), controlled waters and proposed buildings.

A qualitative assessment of the risk of each potential pollutant linkage is given based upon the CIRIA guidance document 'Contaminated Land Risk Assessment: A Guide to Good Practice' (Rudland, Lancefield and Mayell, 2001). The risk is a combination of the probability or frequency of occurrence of a defined hazard and the magnitude of the consequences of the occurrence.

Table 2 - Preliminary Conceptual Site Model

| Source(s)                                                                                                                                                                                                                                       | Potential Pathway(s)                           | Receptor(s)                                                             | Risk Level      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|-------------------------------------------------------------------------|-----------------|
| Probable ACM profile<br>roof sheets and<br>cladding of existing<br>structure<br><br>- <i>Asbestos (Chrysotile)</i>                                                                                                                              | Inhalation of dust                             | Site workers and<br>neighbours,<br>trespassers                          | Low to moderate |

|                                                                                                                                                                                                                                                 | Leaching                                       | Potable water<br>supply pipes<br><br>Groundwater<br>(Principal Aquifer) | Moderate        |
| Infilled ponds noted<br>on historical OS<br>mapping within 250m<br><br>- <i>ground gas<br/>generation<br/>(CO<sub>2</sub> and CH<sub>4</sub>)</i>                                                                                               | Lateral soil migration                         | Proposed structure                                                      | Negligible      |

The site has had historical agricultural use. There was evidence of minor sources of contamination at the time of the visit, including diesel fuel stored in small drums and chlorine bleach, with some probable impact of the near surface soils. Therefore, any intrusive investigation should ascertain the thickness of made ground and target areas of proposed gardens where pollutant linkages are likely to be active. The proposed scope of testing should include for typical priority contaminants, which includes heavy metals, PAH, petroleum hydrocarbons and screening for asbestos containing materials (ACM).

There is potential for historic storage of pesticides and herbicides. However, organic herbicides and/or pesticides have comparatively short half-lives and, whilst the persistence of certain herbicides can vary and depends upon the conditions, any residual contamination

will have dispersed within 5-10 years. Therefore, specific testing for organic herbicides or pesticides is not considered necessary.

The existing ACM cladding and roofing profile cement sheets should be disposed of in accordance with current legislation and best practice, by a licensed waste carrier.

## **7.2 Groundwater**

The depth to groundwater is not known, however is unlikely to be near surface within the underlying Folkestone Formation outcrop.

## **7.3 Geotechnical Hazards**

There are no significant ground stability hazards identified within the Envirocheck report. However, there is a moderate risk from the presence of shrinkable clay associated with the Gault Formation which outcrops immediately to the south.

## **7.4 Conclusions & Recommendations**

A number of potential sources of contamination have been identified on and within the immediate vicinity of the site which may pose a risk to the proposed development. Hence, an intrusive ground investigation should be carried out to assess the identified risks. This work could be combined with a geotechnical investigation in order to provide suitable parameters to enable foundation design.

### Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

### Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

### Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

### Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

### Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

### Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Copyright Notice

## Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

## Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

## Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

## Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

## Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

## Natural Resources Wales Copyright Notice

### Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

#### Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

#### Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

#### Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

**Sussex**

**Published 1874 - 1875**

**Source map scale - 1:2,500**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

The diagram illustrates a rectangular lot divided into two equal halves by a vertical dashed line. The left half is labeled 'TQ23 15' and the right half is labeled 'TQ24 15'. Both halves are marked with a scale of '1956' and '1:2,500'. The entire lot is enclosed within a dashed rectangular border.

A 5x5 grid with columns labeled A1 to A5 and rows labeled 1 to 5. Cell A33 is highlighted with a thick black border and a purple circle.

## Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

### Additional SIMs

Published 1984

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1994

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Historical Aerial Photography

Published 1947 - 1951

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

## VectorMap Local

### Published 2025

### Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
