

T3-T5 It is proposed that the crown raising is undertaken to achieve a 4m clearance from the ground level around the full 360 degrees of the tree stem. This is to facilitate grass cutting operations and to abate nuisance for the users of the path.

T3-T5 A further clearance of epicormic growth (suckers) around the base of the tree to abate nuisance and facilitate inspections. This is raised at every inspection of this site and it would be useful to have this element of the application granted on an ongoing basis.
