Dear Sir or Madam,
Did try sending via your portal but continuously stating server problems.

Car park relocation will be running along the back of our gardens, changed the distance since our consultation to half the distance away from our fence. We will have noise, fumes, horns lights, doors and boots shutting. Speed bumps more noise, it's going to be like a run way. At this time the car park doesn't create any noise for us. We understand testing has been done for the noise level for parking but that's not possible as how can you test this correctly when it's not like for like. We feel our privacy will be compromised and our Garden environment will be affected. Lighting for the car park is of concern plus car lights beaming through to our property into our lounge and bedrooms. Security for the use of parking is a concern, we are hoping a secure system will be put in place example Key entry or card access so it's only used by the correct individuals. We have in the past had our shed broken into and a vehicle drove across the field right up to our gate. We would like the gates secure at all time including weekends. Concerns about the traffic, of Lorrie's, diggers and other equipment coming in, dust clouds and fumes and how long this project will take as this will cause traffic jams on Hurst Road. What the time scale will be and the hours of work and will it continue into the weekend.
