Customer Details

Address: 28 The Driftway Upper Beeding

Comments Details

Commenter Type:	Neighbour
Stance:	Customer objects to the Planning Application
Reasons for comment:	- Highway Access and Parking - Loss of General Amenity - Other
Comments:	Loss of green space, over development. Access via a narrow lane where locals walk regular. Having reviewed the application I have concerns about the Drainage Report Dev 3 where surface water runoff is piped into a swale and that will then run-off into a local ditch. A swale does not

remove 100% of pollutants from surface water so pollutants can enter the local environment.

The report identifies potential contaminants including silts, fines, and heavy metals, in addition there will be silt and suspended sediment during construction, plus other metals, chemicals and nutrients. Once the houses are occupied there is the risk of oil and fuel residues, copper and zinc, rubber and brake/tyre particles, pesticides, litter, and microplastics.

The above is bad enough going into a ditch that wildlife use, however, in winter the field behind us already floods when we have heavy rain, the run off and pollutants will lead to increased flooding in the field and likely flooding into our garden, which is a risk to our dog as well as local wildlife.

We already live on a flood plain, the field behind us can be 90% flooded in winter and our garden regularly has standing water. This development will increase the flood risk due to there being less earth to absorb water and the runoff going into ditch that is already unable to cope in winter.

Kind regards
