Thank you for requesting advice on this application from Place Services' ecological advice service. This service provides advice to planning officers to inform Horsham District Council planning decisions with regard to potential ecological impacts from development.

Application: DC/26/0048
Location: Birchfield Nursery Kidders Lane Henfield West Sussex
Proposal: "Demolition of the existing building and offices and erection of a new commercial building (Classes B2, B8, E, F) and associated works which include the demolition/removal of the wooden building, oak building, portacabin to the north of the site and portacabin to the rear of the existing marquee."

Thank you for consulting Place Services on the above application.

No ecological objection	☐
No ecological objection subject to attached conditions	☒
Further information required/Temporary holding objection	☐
Recommend refusal	☐
Subject to Natural England's formal comments on the conclusion of the LPA's Appropriate Assessment	☐

Please refer to Horsham District Councils advice regarding Water Neutrality requirements following [Natural England's Withdrawal Statement \(31st October 2025\)](#).

Summary

We have reviewed the Preliminary Bat Roost Assessment (GS Ecology, July 2026) relating to the likely impacts of development on designated sites, protected and Priority species & habitats and identification of appropriate mitigation measures. Please note that comments on Biodiversity Net Gain are provided by Horsham District Council in-house.

We are now satisfied that there is sufficient ecological information available to support determination of this application.

The proposals include the demolition of buildings. We previously stated the existing buildings could have suitability for use by roosting bats and the demolition of said buildings without appropriate mitigation could lead to the death or injury of individual bats, or the loss of a roost. Our previous concerns have now been addressed, and the submitted Preliminary Bat Roost Assessment (GS Ecology, July 2026) has found the buildings to be impacted have negligible bat roost potential and no further surveys are recommended. We are now satisfied that the LPA has sufficient information.

We have considered the likely impacts on European Protected Species and applied the Favourable Conservation Status licensing test to demonstrate that the LPA, as a competent authority, has had regard to the requirements of The Conservation of Habitats and Species Regulations 2017 (as amended) as this must not be left until the licence application stage when reaching planning decisions.

This provides certainty for the LPA of the likely impacts on designated sites, protected and Priority species & habitats and, with appropriate mitigation measures secured, the development can be made acceptable.

The mitigation measures identified in the Preliminary Bat Roost Assessment (GS Ecology, July 2026) should be secured by a condition of any consent and implemented in full. This is necessary to conserve and enhance protected and Priority species particularly those recorded in the locality.

We recommend that any external lighting is sensitive to wildlife and secured by a condition of any consent to avoid impacts to foraging and commuting bats. This must follow the [Guidance Note 8 Bats and artificial lighting](#) (The Institute of Lighting Professionals & Bat Conservation Trust). In summary, it is highlighted that the following measures should be implemented for the lighting design, which could be informed by a professional ecologist:

- Do not provide excessive lighting. Light levels should be as low as possible as required to fulfil the lighting need.

- All luminaires should lack UV elements when manufactured. Metal halide, compact fluorescent sources should not be used.
- Warm White lights should be used at <2700k. This is necessary as lighting which emits an ultraviolet component or that has a blue spectral content has a high attraction effect on insects. This may lead in a reduction in prey availability for some light sensitive bat species.
- Where appropriate, external security lighting should be set on motion-sensors and set to as short a possible a timer as the risk assessment will allow.
- Luminaires should always be mounted horizontally, with no light output above 90° and/or no upward tilt.
- Only if all other options have been explored, accessories such as baffles, hoods or louvres can be used to reduce light spill and direct it only to where it is needed. However, due to the lensing and fine cut-off control of the beam inherent in modern LED luminaires, the effect of cowls and baffles is often far less than anticipated and so should not be relied upon solely.

no reasonable biodiversity enhancements for protected, Priority and threatened species, have been recommended to secure net gains for biodiversity, as outlined under Paragraph 187d and 193d of the National Planning Policy Framework (December 2024). Reasonable biodiversity enhancement measures are a separate matter to mandatory biodiversity net gains and the finalised details should be outlined within a separate Biodiversity Enhancement Strategy to be secured as a condition of any consent.

We have no objections on ecological matters excluding Great Crested Newt as we have been instructed to leave comments on this European Protected Species to the [NatureSpace Partnership](#).

This will enable LPA to demonstrate its compliance with its statutory duties including its biodiversity duty under s40 NERC Act 2006 (as amended) and delivery of mandatory Biodiversity Net Gain.

Impacts will be minimised such that the proposal is acceptable, subject to the conditions below based on BS42020:2013. We recommend that submission for approval and implementation of the details below should be a condition of any planning consent.

Recommended conditions

1. PRIOR TO ANY WORKS ABOVE SLAB LEVEL: BIODIVERSITY ENHANCEMENT STRATEGY

“Prior to any works above slab level, a Biodiversity Enhancement Strategy for protected, Priority and threatened species, prepared by a suitably qualified

ecologist, shall be submitted to and approved in writing by the local planning authority.

The content of the Biodiversity Enhancement Strategy shall include the following:

- a) Purpose and conservation objectives for the proposed enhancement measures;*
- b) detailed designs or product descriptions to achieve stated objectives;*
- c) locations of proposed enhancement measures by appropriate maps and plans (where relevant);*
- d) persons responsible for implementing the enhancement measures; and*
- e) details of initial aftercare and long-term maintenance (where relevant).*

The works shall be implemented in accordance with the approved details shall be retained in that manner thereafter.”

Reason: To enhance protected, Priority and threatened species and allow the LPA to discharge its duties under paragraph 187d of NPPF 2024 and s40 of the NERC Act 2006 (as amended).

If external artificial lighting is proposed:

2. PRIOR TO BENEFICIAL USE: WILDLIFE SENSITIVE LIGHTING DESIGN SCHEME

“Prior to beneficial use, a “lighting design strategy for biodiversity” in accordance with Guidance Note 08/23 (Institute of Lighting Professionals) shall be submitted to and approved in writing by the local planning authority. The strategy shall:

- a) identify those areas/features on site that are particularly sensitive for bats and that are likely to cause disturbance in or around their breeding sites and resting places or along important routes used to access key areas of their territory, for example, for foraging; and*
- b) show how and where external lighting will be installed (through provision of lighting layout plans, luminaire specifications, mounting heights, aiming angles, shielding measures, and lighting control strategies) so that it can be clearly demonstrated that areas to be lit will not disturb or prevent the above species using their territory or having access to their breeding sites and resting places.*

All external lighting shall be installed in accordance with the specifications and locations set out in the scheme and maintained thereafter in accordance with the scheme. Under no circumstances should any other external lighting be installed without prior consent from the local planning authority.”

Reason: To allow the LPA to discharge its duties under the Conservation of Habitats and Species Regulations 2017 (as amended), the Wildlife & Countryside Act 1981 (as amended) and s40 of the NERC Act 2006 (as amended).

Please do not hesitate to contact us if you have any queries in relation to this advice.
