Dear Planning,
Please upload this email to file – Many thanks.

Dear Alice,
I have reviewed the comments provided by our consultants Place Services (20th Nov) and note they were generally satisfied the additional information provided addressed their initial concerns.
Further, I also reviewed the applicants response (8th Dec), justifying the use and retention of the proposed native scrub mix from the higher elevation land on the basis of BNG and softening views towards the development. While I support the consultants assessment that the proposed planting may accentuate the change in landform, given this would have a direct impact on BNG, I am satisfied the residual adverse effects are of an acceptable level and therefore satisfied the current proposals are a suitable compromise.

Please let me know if you have any queries or wish to discuss.
Kind regards,
Inês

Inês Watson
