Date: 15/03/24
Site visit carried out by: Ben Aldrich.
Site address :
Twin oaks,
9, Haglands copse,
West Chiltington,
West Sussex

2x Oak tree located in the rear garden of Twin oaks 9 Haglands copse on the rear boundary.
T1 Declining oak.
Approximately 12 meters tall. Lateral branch length of approximately 8 meters on the south side and 6 meters on the east and west side.
There is major dead wood throughout the centre of the crown. Also die back from the tips of the branches all over the crown. Fungus was present but removed by the owner before I visited the site. Suggest removal of the tree due to the poor condition.

T2 Oak tree.
The tree is approximately 15 meters tall I would like to reduce it by approximately 3meters leaving the finished hight at 12 meters tall.
Lateral branch length is currently approximately 6-7 meters from the trunk on the East, South and West sides I would like to reduce this by approximately 2 meters. Leaving the finished lateral branch length of approximately 4-5 meters.
Lateral branch length is currently approximately 4 meters from the trunk on the north side I would like to reduce this by approximately 1 meters. Leaving the finished lateral branch length of approximately 3 meters.
Shape the crown accordingly to leave as balanced crown as possible and remove dead wood.

Kind regards,
Ben.
