

Design and Access Statement

Access to the building is via the shop. A tower scaffold will be erected down the side of the shop to access the roof. There will be enough room for residents who are situated behind the shop to access their properties.

The shop can remain open with nets being used around the outside to ensure no loose tiles fall to the ground.

Slates will be reused where possible. No skip will be necessary as any waste will be removed each day. The works are expected to last 4 weeks.
