Notes:

- The page remembers your most recent position/zoom/map-type for the next time you visit.
- If you haven't visited before, it tries to figure out your location based on your internet address.
- The area computation is done using spherical geometry, so it's correct for large regions.
- The lines between points are drawn as great circles, to go along with the spherical area math.
- Lines that cross the International Dateline **do** work, with a small gap in the line.
