Description of trees and proposed tree work.

Tree ID - 1 x Acer Negundo (Boxelder Maple) marked with a **Blue** circle on the sketch plan

Proposed works - Reshape and re-pollard.

Description and reasons why – This has been pollarded in the past and is now due to be done again as it has lost shape and is growing over the roof line of the house. This tree would benefit from being reshaped to maintain its growing form.

Tree ID – 1 x Prunus avium (Cherry) marked with a **Green** circle on the sketch plan

Proposed works – Reshape and re-pollard

Description and reasons why – This tree has been pollarded in the past and is now due to be done again as it has lost shape.

Tree ID – 1 x Prunus speices unknown (Cherry) marked with a **Purple** circle on the sketch plan

Proposed works – Reshape and re-pollard

Description and reasons why – This tree has been pollarded in the past and is now due to be done again as it has lost shape.

Tree ID - on 1 x Eucalyptus  marked with a **Red** circle on the sketch plan

Proposed works – Reduce the height of the tree by approximately 5m and bring the canopy in by approximately 2-3 meters back to growth points to reduce overall size of the tree to create a smaller crown.

Description and reasons why – This is a large tree situated in a small to medium sized garden which runs paraell with the main high street of the village, there is also a bus stop in relative proximately. I feel if would be beneficial to reduce the tree to limit risk of branch failure in high winds especially with it being so close to the road.

Tree ID - 1 x Fraxinus excelsior (Ash) marked with a **Orange** circle on the sketch plan

Proposed works – Reduce crown and reshape

Description and reasons why – This ash has been gowning under the shade of the eucalyptus canopy which has meant it has grown towards the direction of available light which is in the direction of the main high street and bus stop. Although this ash does not currently seem to have sings of die back it would benefit from having a reshape to balance the crown.

Tree ID – Leylandii Hedge Marked in dark **Green** rectangle on the sketch plan

Proposed works – Reduce height and lateral growth.

Description and reasons why – This hedge has been trimmed and reduced in the past and has now regrown above the original reduction. It is located along the boundary of the garden which is adjacent to the High Street and bus stop. The lateral grown extends over the path and bus shelter and would benefit from being tidied up to prevent this from interfering with traffic and tall vehicle's. On the garden side the height is impacting the roofline of the house and we would propose to reduce off the house and 1 – 1.5 meters under the gutter line.
