Re: Tree Surgery & Stump Grinding Quotation:

Further to our recent meeting to discuss your Tree Surgery and Stump Grinding requirements, I am pleased to enclose my quotation for the necessary work involved.

You firstly require several items of Tree Surgery work to be carried out around your property as detailed in the enclosed 'Schedule of Works' list attached.

Lowering work will be carried out to avoid any damage to surrounding property. All brushwood debris removed will be converted into mulchwood chipping on site and left for your disposal as requested. All other larger timbers will be sawn out into firewood logs and rings, also left for your disposal, and the grounds left tidy.

To carry out the above mentioned 'Tree Surgery' works as to the enclosed 'Schedule of Works' will be;

Further to the above mentioned works you then require the stump and root systems of the trees as highlighted in *Italic type* within the enclosed 'Schedule of Works' to be ground out with one of our self propelled mobile stump grinding machines. The stumps will be ground out to approximately 8-10" below ground level. All mulch wood and soil debris removed will be back filled, levelled over and left for your disposal, and the grounds left tidy.

To carry out the above mentioned 'Stump Grinding' work as an extra over as to the enclosed 'Schedule of Works' will be;

I hope you will find this to your satisfaction and I look forward to hearing from you in due course, and remain,

Encl:
