Thanks for the email.

In answer to your questions, the finished height of T2 and T3 after works have been carried out would be the same for both trees. 12m height, with the spread of 6m.

Please see report attached, which I was unable to attach via the portal.

One other question, as my client has received a letter from West Sussex Highways Agency, which highlights the hazardous nature of the trees, would it be possible to advance in carrying out the works to make the tree safe as soon as possible? I am aware that a planning decision could take up to 6-8 weeks otherwise.

I look forward to hearing from you.

Best wishes,

Max Ferretti ND Arb, TechArborA
