Apologies for the delay.

The tree is a Cherry not a sycamore there is no other trees any where near. So im guessing its misidentified on your system or the sycamore was removed and replaced with a Cherry.

My application was for a tree in the conservation area as I assumed the cherry was not covered by a tpo, as on your mapping system it states sycamore.

The cherry trees exact location is ///backfired.lunching.midfield
On What three words.

The cherry tree has a crown spread of 4 meters and a hight of 5 meters currently.

Kind regards,

Ben.
