Hello,

Please find attached the relevant information you have requested to validate the application.

The Oak in question has a starting height of roughly 28 meters tall, we are asking for the finished height to be around 25 meters. This would be following the previous crown reduction that was last carried out. Each individual branch / stem I would say is roughly 8 - 11 meters, we are asking for a 3-meter crown reduction. I will attach a photo to this email of the tree in question, this is taken from the roadside looking north.

This application has been submitted for the crown reduction for the reason of controlling the canopy as the Oak lies on the boundary between the two properties. The crown is overshadowing the buildings, blocking light and causes a lot of leafs to land on both properties' roofs in the winter.

Please let me know if you require any further information.

Kind regards,
Daniel
