Morning [REDACTED]

Below is the required information which I have copied from the application from the planning portal , and information for T2 is also in the attached report.

T1 Quercus robur (Common Oak) Situated behind the property along side the drive to Penshurst and Mayfield House. Semi mature with good vitality , would like to reduce branches on the west side which extend to the house by 1.5 meters approx , branches are currently 5 >6 meters long approx and reduce the crown by thinning by 10 % and remove deadwood. T2 Quercus robur (Common oak) Stuated at the end of the rear garden at the north eastern corner largely over hanging the drive of Mayfield House. A mature tree with good vitality, crownsread 16-20 meters approx. Cavity on the west side at 2.2 meters from the ground which extends 60 cm into the stem . Some minor dead wood on the east side over the drive of Mayfield House. Due to tree condition and two drives and one house within the target area we would like to reduce the crown by approx 2 meters overall to suitable growth points lower limbs are approx 6 meters in length and reduce further crown wheight by thinning by 10 % only as the crown has been thinned already in recent years. Please see attached reports.
