Attachments: Proposed trial hole locations.pdf

Good morning both. It was good to catch up with you yesterday.

Based on our discussions I have drawn up a plan of the proposed sampling locations.

We propose to just take a topsoil sample from TP1 (at the location of the previous TP07) and test for arsenic only.

The remaining trial holes will be excavated through the topsoil and into the sub-soil and samples will be taken from both stratum.

On receipt of the engineers logs we can then decide on which samples to test for the full GESL/4 suite, but this will be eight in total and a mixture of topsoil and sub-soil samples.

I'd be pleased if you could confirm that this meets with your requirements.

I am in the office all day today should you wish to call and discuss.

Best Regards

Glyn
