**Note:**  
Following a detailed assessment of the existing site and our proposed landscape enhancements, the ecologists have confirmed that the site was found to have a baseline value of 15.53 habitat units. Under the current proposal, a net gain of 6.59 habitat units, equating to 42.47%, is expected. The positive increase in biodiversity is largely attributed to the provision of other neutral grassland, biodiversity green roof, traditional orchard, modified grassland and individual trees. There is also a positive increase of 2.32 hedgerow units, equating to 38.05%, expected within the proposals. Hedgerow units are met for both habitat and hedgerow units.
