

Case Ref: DC/26/1095	Date: 09/09/2026
From: Naturespace District Licence Officer	Response: No objection
Application Details Outline application for Erection of a Golfpod Practice Facility with associated hard and soft landscaping at Mannings Heath Golf Club Hammerpond Road Mannings Heath West Sussex RH13 6PG.	
Recommended Actions I am satisfied that if this development were to go ahead it would be unlikely to have an impact on great crested newts or their habitats. No further surveys or mitigation are recommended.	
Comments: Proposed development is sited on unsuitable habitat. These comments are valid for 12 months (in line with CIEEM guidelines for ecological survey lifespan) and if any additional or revised ecological information is submitted, we request that we be re-consulted. Contact details: info@naturespaceuk.com	
District Licence Officers Horsham District Council holds a Great Crested Newt Organisational (or "District") Licence granted by Natural England. This is administered by NatureSpace Partnership through their District Licensing Scheme as the council's delivery partner. A dedicated District Licence Officer is employed by NatureSpace to provide impartial advice to the council and help guide them and planning applicants through the process. All services and arrangements are facilitated in an unbiased, independent and transparent manner. You can find out more at www.naturespaceuk.com	
Legislation, Policy and Guidance Reasonable Likelihood of Protected Species Permission can be refused if adequate information on protected species is not provided by an applicant, as it will be unable to assess the impacts on the species and thus meet the requirements of the National Planning Policy Framework (December 2024) section 15, ODPM Circular 06/2005 or the Conservation of Habitats and Species Regulations 2017 (as amended). The Council has the power to request information under Article 4 of the Town and Country (Planning Applications) Regulations 1988 (SI1988.1812) (S3) which covers general information for full applications. CLG 2007 'The validation of planning applications' states that applications should not be registered if	

there is a requirement for an assessment of the impacts of a development on biodiversity interests.

Section 99 of ODPM Circular 06/2005 states:

“It is essential that the presence or otherwise of protected species, and the extent that they may be affected by the proposed development, is established before the planning permission is granted, otherwise all relevant material considerations may not have been addressed in making the decision. The need to ensure ecological surveys are carried out should therefore only be left to coverage under planning conditions in exceptional circumstances, with the result that the surveys are carried out after planning permission has been granted. However, bearing in mind the delay and cost that may be involved, developers should not be required to undertake surveys for protected species unless there is a reasonable likelihood of the species being present and affected by development. Where this is the case, the survey should be completed and any necessary measures to protect the species should be in place, through conditions and / or planning obligations before permission is granted.”

Great crested newts

Great crested newts and their habitats are fully protected under the Conservation of Habitats and Species Regulations 2017 (as amended). Therefore, it is illegal to deliberately capture, injure, kill, disturb or take great crested newts or to damage or destroy breeding sites or resting places. Under the Wildlife and Countryside Act 1981 (as amended) it is illegal to intentionally or recklessly disturb any great crested newts occupying a place of shelter or protection, or to obstruct access to any place of shelter or protection (see the legislation or seek legal advice for full details). Local planning authorities have a statutory duty in exercising of all their functions to ‘*have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving and enhancing biodiversity,*’ as stated under section 40 of the Natural Environment and Rural Communities Act 2006 (as amended), as well as a duty under the Conservation of Habitats and Species Regulations 2017 (as amended) to have regard to the requirements of the Habitats Directive. As a result, GCN and their habitats are a material consideration in the planning process.

Lifespan of Ecological Reports and Surveys

Validity of ecological reports and surveys can become compromised overtime due to being out-of-date. CIEEM Advice note on the Lifespan of Ecological Reports and Surveys (CIEEM, 2019 states, if the age of data is between 12-18 months, “*the report authors should highlight whether they consider it likely to be necessary to update surveys*”. If the age of the data is between 18 months to 3 years an updated survey and report will be required and anything more than 3 years old “*The report is unlikely to still be valid and most, if not all, of the surveys are likely to need to be updated*”.
