Prunus avium (Wild Cherry) is a fast-growing deciduous tree, typically growing 20–40 cm per year. It quickly reaches a mature height of 15–25 meters in roughly 20–30 years.

A spreading, deciduous tree with nodding clusters of pure white flowers 2.5cm wide in late spring, followed by small, shiny red-purple fruits; dark green leaves, bronze when young, turn orange and red in autumn.

***Acer campestre* (Field Maple)**

A medium-sized deciduous tree with a compact bushy crown. Leaves with 5 blunt lobes, turning yellow or red in the autumn. Flowers small, green, forming typical winged maple fruits.

Eventual Height: 8m – 15m (up to 20m in rare cases).

Eventual Spread: 4m – 8m.

Growth Rate: Fast (40–60cm per year).

Time to Ultimate Height: 10–20 years.

***Carpinus betulus* 'Frans Fontaine'** (Frans Fontaine Hornbeam)

A narrow, columnar deciduous tree known for holding its compact shape better than *C. betulus* 'Fastigiata' as it matures.

Eventual Size (After 20–50 Years) Height: Typically 10–15m Spread: Narrow, typically 2–3 metres

Growth Characteristics

Growth Rate: Moderate, roughly 30–50cm per year.

Size after 10–12 years: Often around 5–6 metres high and 1–2 metres wide.

Appearance: Fresh green leaves in spring and summer, turning golden yellow in autumn. It often holds its brown dead leaves through winter, providing year-round screening.

Quercus robur (Common Oak)

A large, deciduous tree potentially reaching a mature height of between 20 to 40m in height, with a broad crown and strong branches beneath. Dark green, rounded and lobed foliage, smooth at the edges, turns reddish-brown in autumn. Inconspicuous, long, yellow-green catkins appear in spring, followed by green acorns, ripening to brown, around 2-2.5 cm long.
