Comments:	I realise that, as the consulted neighbour, the representation I am now making is after the closing date. I had been waiting for an uploaded response from an Environmental Officer which has now appeared on public access. Following my conversation with him yesterday I must start by saying that my neighbours at 103 are a lovely couple and had kept me informed about their proposal for the air source pump. It is very difficult to know until it is up and running as to whether or not the noise will be intrusive. I suppose the only reservation I have is that (because our houses were built in the early 1900s with shared access from the footway) there is limited space between their east facing (where the Air Source pump will be sited) and my west facing wall which are in close proximity to each other. There is only an interwoven boundary fence which is my responsibility and is not full height having open trellis work on top. So it has limited function as an acoustic barrier. I support the Environmental Officer's recommendation that there is restrictive use between 11pm and 7am as (with both houses) there is a bedroom window which overlooks the

proposed location of the air source pump.

I do wish my neighbours well with the proposal but, as I have said, I'll have to wait and see about the operating noise not only for me but possibly for my neighbours as well...

Kind regards
