

Below is the proposed works he suggested and would like to carry out following successful completion of the TPO application:

- Current height of the tree, as he estimates is 15m. He proposes a 3m reduction in height so the new height would be 12m.
- 15m current crown spread. He proposes a 3m reduction all round, therefore the new crown spread would be 9m.
- Removal of the lowest branch on the south side back to trunk due to close proximity to the property and excessive shading. He informed us that this would have no effect on the long term growth, health or balance of the tree as the majority of the growth is on the east and west side as opposed to the north and south side.
- Removal of deadwood.
