

Suspended boardwalk over extended basin creates a point of interest and integrates the basin into the wider landscape

Native planting softens banks and adds habitat and visual variety

Meadow planting

Opportunity for seating areas alongside basin banks

Existing trees to be retained. Any work to the basin to avoid Root Protection Areas

Undulating footpath following basin banks with adjacent tree planting softens views and offers scenic route

Ditches and small depressions to be created at the bottom of the basin to create opportunities for permanently wet areas and habitat creation. Basin banks to be undulating and to allow for shelves for aquatic and native planting, in order to soften the banks and drainage structures and to offer visual amenity

Natural play to be integrated into a shallow depression, which connects the informal, sensory play elements with the attenuation basin, both visually and through undulating landscape sculpting. Slopes to be gentle, maximum 1:4

Play area fence with access gates

Feature trees to create focal points through texture, colour and height
