Validation Report

CLIENT	Highwood Group
SITE ADDRESS	Old Clayton Kennels and Cattery, Storrington Road, Washington, West Sussex RH20 4AG
PROJECT NUMBER	GWPR6344. The terms and conditions of this report can be seen within Appendix A.
ENGINEER	Roger Foord, Ground and Water Limited
DATE	Wednesday 3 rd December 2025
RELEVANT DOCUMENTATION	- Ground and Water Limited Phase II Ground Investigation Report (GWPR6344/GIR/May 2025 v3.01). - Ground and Water Limited Remediation Method Statement Report (GWPR6344/RMS/July 2025 v2.01).
REMEDIATION	Ground and Water Limited Remediation Method Statement Report (GWPR6344/RMS/July 2025 v2.01): As agreed with the Local Authority (HDC), the following remediation scheme was required around the three locations of contamination centred on trial holes WS109, HP108 and SA101: For the hotspot centred on WS109: - A reduce dig of 500mm in the vicinity of WS109 to expose the natural soils; - Validation samples shall be taken from the base and sides of the excavation and tested. - Until the laboratory test results are received the excavation will remain open. Should these samples indicate unacceptable concentrations, further removal is required. - Following receipt of the results confirming no contamination remains, the placement of 500mm certified clean capping of Subsoil and Topsoil; - Validation of the clean capping system by a suitably trained Ground and Water Limited engineer. For the hotspot centred on HP108 which is located close to a tree protection zone TPZ: - In areas outside the TPZ: - A reduce dig of 800mm to expose the natural soils; - Validation samples shall be taken from the base and sides of the excavation and tested. - Until the laboratory test results are received the excavation will remain open. Should these samples indicate unacceptable concentrations, further removal is required. - Following receipt of the results confirming no contamination remains, the placement of 800mm certified clean capping of Subsoil and Topsoil; - Validation of the clean capping system by a suitably trained Ground and Water

Limited Engineer.

- In areas within the TPZ:
 - A reduce dig of a maximum of 100mm by hand to avoid damage to any roots;
 - Placement of a geotextile membrane;
 - Placement of 100mm certified clean capping of Topsoil;
 - Validation of the membrane and clean capping system by a suitably trained Ground and Water Limited Engineer.

For the hotspot centred on SA101 which is located close to a tree protection zone TPZ:

- In areas outside the TPZ:
 - A reduce dig of 10000mm to expose the natural soils;
 - Validation samples shall be taken from the base and sides of the excavation and tested.
 - Until the laboratory test results are received the excavation will remain open. Should these samples indicate unacceptable concentrations, further removal is required.
 - Following receipt of the results confirming no contamination remains, the placement of 1000mm certified clean capping of Subsoil and Topsoil;
 - Validation of the clean capping system by a suitably trained Ground and Water Limited Engineer.
- In areas within the TPZ:
 - A reduce dig of a maximum of 100mm by hand to avoid damage to any roots;
 - Placement of a geotextile membrane;
 - Placement of 100mm certified clean capping of Topsoil;
 - Validation of the membrane and clean capping system by a suitably trained Ground and Water Limited Engineer.

**VALIDATION
INSPECTION:
hotspot centred on
WS109**

A site visit was undertaken by a Ground and Water Limited Engineer on the 18th June 2025 to verify the remediation of the hotspot centred on WS109. During the setting out of the of the site, it was determined that the hotspot fell under the footprint of the proposed care home. As a result the area would no longer pose a risk to end users. The Made Ground had been removed and a membrane placed in the excavation and we were informed the excavation was back filled with site won material. No soil was imported onto the site and therefore no testing of the backfill materials was required. The location of the remediation area can be seen in Figure 1. Photographs taken during the validation exercise are shown in Appendix B.

**VALIDATION
INSPECTION:
hotspot centred on
SA101**

A site visit was undertaken by a Ground and Water Limited Engineer on the 9th July 2025 to verify the remediation of the hotspot centred on WS109. During the setting out of the of the site, it was determined that the hotspot fell under the proposed access road. As a result the area would no longer pose a risk to end users. The Made Ground was removed to a depth of ~0.80m bgl and a membrane placed in the excavation and we were informed the excavation was back filled with site won material and the sub-base for the road. No soil was imported onto the site and therefore no testing of the backfill materials was required. The location of the remediation area can be seen in Figure 1. Photographs taken during the validation exercise are shown in Appendix C.

**VALIDATION
INSPECTION:
hotspot centred on
HP108**

A site visit was undertaken by a Ground and Water Limited Engineer on the 17th September 2025 to verify the remediation of the hotspot centred on HP108. Since the location was found to fall within the Tree Protection Zone (TPZ), 100mm of Topsoil was stripped from an area approximately 4.00m by 2.50m in area and centred on the former location of trial hole HP108. A geotextile membrane was placed in the base of the excavation and the void infilled with site won Topsoil that had previously been shown to be suitable for use within soft landscaped area during Phase IV of the siteworks (Ground and Water Limited Phase II Ground Investigation Report (GWPR6344/RMS/July 2025 v2.01)). No soil was imported onto the site and therefore no testing of the backfill materials was required. The location of the remediation area can be seen in Figure 1. Photographs taken during the validation exercise are shown in Appendix D.

**DISPOSAL OF
EXCAVATED SOILS**

The excavated soils from the three remediation areas were stockpiled on a membrane prior to their removal from site. Photographs of the stockpiles are shown in Appendix E and the Waste Transfer Tickets are shown in Appendix F.

**DISCUSSION AND
CONCLUSION**

Following the remediation and validation exercises undertaken, the site is not likely to be classified as contaminated in accordance with the Environmental Protection Act 1990: Part 2A – Contaminated Land Statutory Guidance.

Signed:

Roger Foord CGeol
Senior Engineer
For and on behalf of Ground and Water Limited

APPENDIX A

Conditions and Limitations

The ground is a product of continuing natural and artificial processes. As a result, the ground will exhibit a variety of characteristics that vary from place to place across a site, and also with time. Whilst a ground investigation will mitigate to a greater or lesser degree against the resulting risk from variation, the risks cannot be eliminated.

The report has been prepared on the basis of information, data and materials which were available at the time of writing. Accordingly, any conclusions, opinions or judgements made in the report should not be regarded as definitive or relied upon to the exclusion of other information, opinions and judgements.

The investigation, interpretations, and recommendations given in this report were prepared for the sole benefit of the client in accordance with their brief; as such these do not necessarily address all aspects of ground behaviour at the site. No liability is accepted for any reliance placed on it by others unless specifically agreed in writing.

Any decisions made by you, or by any organisation, agency or person who has read, received or been provided with information contained in the report (“you” or “the Recipient”) are decisions of the Recipient and we will not make, or be deemed to make, any decisions on behalf of any Recipient. We will not be liable for the consequences of any such decisions.

Current regulations and good practice were used in the preparation of this report. An appropriately qualified person must review the recommendations given in this report at the time of preparation of the scheme design to ensure that any recommendations given remain valid in light of changes in regulation and practice, or additional information obtained regarding the site.

Any Recipient must take into account any other factors apart from the Report of which they and their experts and advisers are or should be aware. The information, data, conclusions, opinions and judgements set out in the report may relate to certain contexts and may not be suitable in other contexts. It is your responsibility to ensure that you do not use the information we provide in the wrong context.

This report is based on readily available geological records, the recorded physical investigation, the strata observed in the works, together with the results of completed site and laboratory tests. Whilst skill and care has been taken to interpret these conditions likely between or below investigation points, the possibility of other characteristics not revealed cannot be discounted, for which no liability can be accepted. The impact of our assessment on other aspects of the development required evaluation by other involved parties.

The opinions expressed cannot be absolute due to the limitations of time and resources within the context of the agreed brief and the possibility of unrecorded previous in ground activities. The ground conditions have been sampled or monitored in recorded locations and tests for some of the more common chemicals generally expected. Other concentrations of types of chemicals may exist. It was not part of the scope of this report to comment on environment/contaminated land considerations.

The conclusions and recommendations relate to the Old Clayton Kennels and Cattery, Storrington Road, Washington, West Sussex RH20 4AG.

Trial hole is a generic term used to describe a method of direct investigation. The term trial pit, borehole or window sampler borehole implies the specific technique used to produce a trial hole.

The depth to roots and/or of desiccation may vary from that found during the investigation. The client is responsible for establishing the depth to roots and/or of desiccation on a plot-by-plot basis prior to the construction of foundations. Where trees are mentioned in the text this means existing trees, recently removed trees (approximately 15 years to full recovery on cohesive soils) and those planned as part of the site landscaping.

Ownership of copyright of all printed material including reports, laboratory test results, trial pit and borehole log sheets, including drillers log sheets, remain with Ground and Water Limited. Licence is for the sole use of the client and may not be assigned, transferred or given to a third party.

Only our client may rely on this report and should this report or any information contained in it be provided to any third party we accept no responsibility to the third party for the contents of this report save to the extent expressly outlined by us in writing in a reliance letter addressed from us to the third party.

Recipients are not permitted to publish this report outside of their organisation without our express written consent.
