Thank you for your email. Details covering the requested extra information are as follows:

The limb subject to the proposed works is approximately 6 metres in total length. The proposed reduction of 3 metres will therefore leave approximately 3 metres of the limb remaining, reducing end weight while retaining a suitable proportion of the limb. This will also bring the limb back into line with the rest of the canopy.

I have requested photographs from the client and, while the quality is limited, I have attached these for reference to indicate the limb in question and the proposed point of reduction.

The limb is located on the west side of the tree.

Please let me know if any further information is required.

Kind regards,
Isaac
