Proposed tree works at Storrington Mill Pond Conara001

Horsham District council wished to perform the following works in line with recommendations made by our tree inspector after their site visit in December 2024.

T1 Willow 1207 Re-pollard to previous pollard points

T2 Sycamore 678 Cut back by 2m from nearby property.

T3 Alder 0083 Removal 1x stem due to basal decay. The tree has an area of dysfunctional wood with a non-occluded cavity at the base of one of its stems. The tree is in an area of moderate use and has multiple targets within one stem length. The species loses structural integrity rapidly when dysfunctional. We will remove the stem and monitor remaining stems closely.

T4 Alder 0591 Removal due to tree decline. The tree is showing signs of physiological decline. The tree is in a moderate use area and has multiple targets including a road within one tree length. The tree will be removed before it loses structural integrity.

T5 Alder 5973 Removal due to basal decay. The tree has a large non occluded cavity in its base with areas of dysfunctional wood. The tree has a pronounced lean over multiple targets.

T6 Rowan Removal due to tree decline. The tree is in an advanced state of decline and has lost structural integrity.
