Sewage Treatment Capacity

Again brought into question the capabilities of the BG Treatment works being able to cope with the sewage

from DC/26/0933. Sewage from DC/26/0933 must be brought in and considered with DC/25/2057. SW have now

come up with a figure of 0.28l/s from the figure quoted earlier in 2026 of 0.6l/s. How has this changed? From a meeting that was held

by John Milne MP with the CEO of SW, now new testing equipment is being used, these are 'smoke and mirror' comments. The facts that

Parsons Brook is getting polluted by the BG Treatment works , this being due to BG being now over populated regarding the amount of population

and inadequate and poor maintenance which has already been said. Now there is Itchingfield works closing and that sewage is coming to BG,

there is the site behind Ashmiles being considered and , the 1000 houses coming to Southwater. When will common sense prevail

In 9/04/2025 a letter from Southern Water Ref EIR 3295 stated that the BG treatment works could support a population of 1018. Since then,

how has the sewage system changed, it has not. What has changed is the urgency to build houses irrespective has to utilities and infrastructure

-

Kind regards
