Good afternoon,

Thank you for your email requiring further details about the willow tree works at 66 silver lane.
I have spoke to Andy Bush for some guidance about how to get this information, he advised me that the terminology I used may have been incorrect or confused the situation.
Works required are to pollard back to its existing pollard points from the trees last maintenance works in 2022.
The trees current height is estimated at 40ft and taking it back to previous polard points would make it about 30ft overall.

The reason for the works it's general health and maintenance of quite a large and drooping tree. We are conscious it overhangs the church/church-hall/pre school car park and both our and our neighbours fence. We were advised general maintenance every 4-5 years was required.

If you wish to come take a look please do feel free, it can be accessed at any time from the church car park or I can make myself available if you wish to see from the garden.
I have attached the pictures from the application again.

Kind regards
