Tree Protection Fencing (TPF)

The alternative specification comprises 2m tall, welded mesh panels such as 'heras' panels, set within rubber feet to avoid the need for excavation within the RPAs of retained trees. Individual panels will be joined together using a minimum of two anti-tamper couplers that can only be removed from within the construction exclusion zone. Stabilising struts secured to a base plate with road pins, or to a block tray where fencing is to be erected onto existing hard surfaces, will be incorporated between every other panel.
