

Application to remove Alder 020 St Cuthman's field Steyning.

Asset notes:

“Tree inside the fenced stream area. Adjacent rear of 4 King Alfred Close. Minor black staining, pseudomonas spp. Ivy severed. Minor deadwood over stream.

22-04-2. As previously recorded in the last assessment, black exudations are present sporadically on the lower stem. In addition to the previous pathogen suggested, the symptoms are now considered more likely to be caused by *Phytophthora alni*. With the of this exception of this symptom, the tree looks otherwise well. Continue to monitor”...

26-05-08

Take down to the height of the first branch.

Tree has massively declined since last inspection.

Observe good bio security for tools and kit.
